

Matterport 3D Video Technology

G.W. Savage has begun to utilize Matterport 3D Video Technology to offer interactive 3D models of property losses/property tours. This technology is also commonly used for property management and real estate purposes. Matterport technology allows property managers, insurance adjusters, and prospective buyers or renters to virtually explore a property. The Matterport technology is state-of-the-art and can produce complete 3D models of a property within just a few hours after the scans are complete. Each room only requires a few minutes to scan, and most properties can be scanned in less than 45 minutes.

What Can Matterport Do For You?

- Gives first hand account of the property in its current state.
- Saves you and prospective buyers/renters time and energy by scheduling less viewing appointments.
- Allows prospective renters or current tenants to view your properties conveniently from their own homes.
- Offers prospective tenants accurate measurements of a room to ensure that their belongings will fit.
- Ensures transparency and fairness to all parties involved with its full visual documentation.
