

## **Ozone Generators**

Ozone generators are odor counteractants that effectively remove odors from both furniture and homes. Once ozone is produced, it reacts with a pollutant, bacteria, virus, or mold and breaks it down into less complex and harmful molecules through oxidation to kill odor-causing bacteria in homes, businesses, cars, basements, and other spaces. Ozone that hasn't been treated with other molecules will decompose into oxygen over time. It is also a great tool to use to remove smoke odor from both furniture and homes.

### **Ozone Uses:**

- Deodorizes Furniture & Homes of Smoke Smell
- Eliminates Cigarette & Marijuana Smoke
- Removes Gasoline Odor
- Kills Skunk Smell
- Food & Pet Smells
- Kills Mildew & Mold Spores

**DO NOT** use Ozone in an occupied space with people, plants, rubber, or animals.
